

Mongo

open cmd → mongod.

open command prompt → create student database
in mongosh~~in db collection~~ → use student

> db.createCollection("student1")

> db.student1.insertOne({name: "abc", regno: "12345"})

8 > db.student1.find()

open node.js command prompt.

> mkdir retrieve

> cd retrieve

> npm init

> npm install express

> npm install @mongodb

open VScode Editor

create app.js in root directory

app.js

const express = require('express')

const {mongoClient} = require('mongodb');

const app = express();

const uri = "mongodb://127.0.0.1:27017";

const dbname = "students";

const coll = "students";

console.log("connect DB:", uri);

const client = new MongoClient(uri)

const wholecoll = client.db(dbname).collection(coll);

const connectDB = async() => {

```

    try {
      await client.connect();
      console.log("connected :", dbname);
    }
    catch (err) {
      console.error('Error connecting : ${err}');
    }
  };

  const main = async () => {
    try {
      await connectDB();
      let result = await wholeColl.find({}), toArray();
      console.log("result", result);
    }
    catch (err) {
      console.error('Error did come up : ${err}');
    }
  };

  main();
  app.listen(3000, async () => {
    await connectDB();
    console.log("App is running");
  });

```
